

## More Integer Triangles with $R/r = N$

John F. Goehl, Jr.

**Abstract.** Given an integer-sided triangle with an integer ratio of the radii of the circumcircle and incircle, a simple method is presented for finding another triangle with the same ratio.

In a recent paper, MacLeod [1] discusses the problem of finding integer-sided triangles with an integer ratio of the radii of the circumcircle and incircle. He finds sixteen examples of integer triangles for values of this ratio between 1 and 999. It will be shown that, with one exception, another triangle with the same ratio can be found for each.

MacLeod shows that the ratio,  $N$ , for a triangle with sides  $a$ ,  $b$ , and  $c$  is given by

$$\frac{2abc}{(a+b-c)(a+c-b)(b+c-a)} = N. \quad (1)$$

Define  $\alpha = a + b - c$ ,  $\beta = a + c - b$ , and  $\gamma = b + c - a$ . Then

$$\frac{(\alpha + \beta)(\beta + \gamma)(\gamma + \alpha)}{4\alpha\beta\gamma} = N. \quad (2)$$

Let  $\alpha'$  and  $\beta'$  be found from any one of MacLeod's triangles. Then (2) may be used to find  $\gamma'$ . But notice that (2) is then a quadratic equation for  $\gamma$ :

$$(\alpha' + \beta')(\alpha' + \gamma)(\beta' + \gamma) = 4N\alpha'\beta'\gamma. \quad (3)$$

One root is the known value,  $\gamma'$ , while the other root gives a new triangle with the same value for  $N$ . Note that the sum of the two roots is  $-\alpha' - \beta' + \frac{4N\alpha'\beta'}{\alpha' + \beta'}$ . Since one root is  $\gamma'$ , the other is given by

$$\gamma = -\alpha' - \beta' - \gamma' + \frac{4N\alpha'\beta'}{\alpha' + \beta'}.$$

For  $N = 2$ ,  $a = b = c = 1$ ; so  $\alpha' = \beta' = \gamma' = 1$  and  $\gamma = 1$ . No new triangle results.

For  $N = 26$ ,  $a = 11$ ,  $b = 39$ ,  $c = 49$ ; so  $\alpha' = 1$ ,  $\beta' = 21$ ,  $\gamma' = 77$  and  $\gamma = \frac{3}{11}$ . Scaling by a factor of 11 gives  $\alpha' = 11$ ,  $\beta' = 231$ , and  $\gamma' = 3$ . The sides of the resulting triangle are  $a' = 121$ ,  $b' = 7$ , and  $c' = 117$ .

The first few values and the last value of  $N$  given by Macleod along with the original triangles and the new ones are shown in the table below.

| $N$ | $a$  | $b$   | $c$   | $a'$ | $b'$  | $c'$  |
|-----|------|-------|-------|------|-------|-------|
| 1   | 1    | 1     | 1     | 1    | 1     | 1     |
| 26  | 11   | 39    | 49    | 7    | 117   | 121   |
| 74  | 259  | 475   | 729   | 27   | 1805  | 1813  |
| 218 | 115  | 5239  | 5341  | 763  | 12493 | 13225 |
| 250 | 97   | 10051 | 10125 | 1125 | 8303  | 9409  |
| 866 | 3025 | 5629  | 8649  | 93   | 73177 | 73205 |
